

The End Ohio Cannabis Prohibition Act Includes:

- 1) Home growing, up to 24 plants per person, for up to 4 people per household, and the grower must own the property or have the owner's permission. Age of the plants is not specified, so clones, seedlings, etc. will count towards the 24.
- 2) Sales. After \$400 / year, the income needs to be reported on tax filings.
- 3) Commercial production. A license is necessary after earning income equal to the federal standard deduction for a single taxpayer, which is \$6,200 this year. Licenses capped @ \$1,250 for any single production or retail site.
- 4) Sales taxes that may be applied. Other excise or "sin" taxes are prohibited.
- 5) Home growing plant limits for commercial production on residential property, but no limits on properties zoned for agricultural or commercial use.
- 6) No possessing or smoking on school buses or in correctional facilities. No smoking in any public place that prohibits it.
- 7) Prohibiting city bans on cultivation and retail establishments. Any such bans must be passed by a vote of the people in order to become / remain law.
- 8) Drug testing for cannabis metabolites is prohibited for any purposes, and if any are found through medical testing, it still may not be used as proof of current intoxication, since there's currently no accurate way to determine that.
- 9) Expungement. Anyone with cannabis related charges that are made legal by our initiative will have an avenue to have those charges removed. If those charges are the only thing keeping them incarcerated or on probation or parole, they will be set free!
- 10) Affirmative defense for juveniles and their parents so that they are free to give their kids a safer, more effective medicine.
- 11) Protections for parental, property, and gun rights, among other protections.
- 12) Farmers would be allowed to grow HEMP! Ohio can become a booming epicenter for hemp production and manufacturing again!
